

BUNYAN
ENERGY CENTER

Supporting a Stronger Grid

Bunyan Energy Center is a proposed 250 MW, four megawatt-hour battery energy storage facility in Benton County, Minnesota that will bring many positive impacts to the local economy and community. This facility will store electricity and dispatch it to the local electric grid during peak demand hours or during emergency outages. It will be able to power the equivalent of approximately 35,000 Minnesota homes for 24 hours.

We look forward to working in partnership with local officials, area residents, and business owners on the development of this energy project.

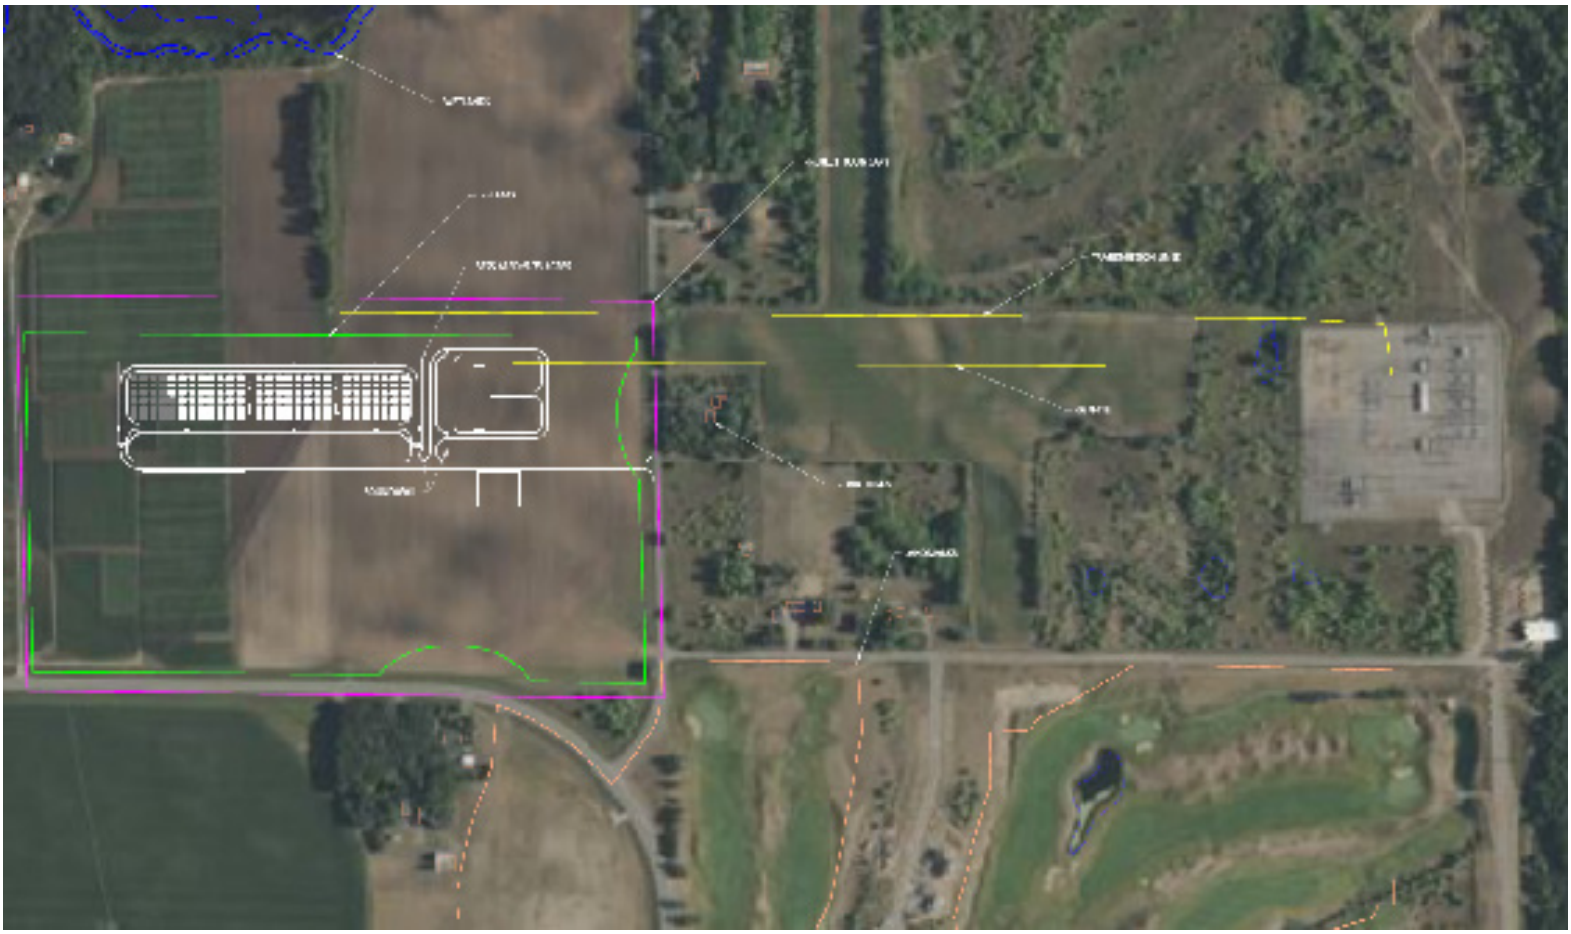

BUNYAN
ENERGY CENTER

The Benefits of Energy Storage in Benton County:

- Provides new streams of tax revenue, helping to fund local public schools and infrastructure
- Delivers clean, reliable energy while lowering emissions and improving air quality
- Generates local jobs and economic activity during construction while supporting long-term community investment
- Creates long-term grid resiliency and electricity reliability, reducing outages and their duration
- Makes a great neighbor with clean, quiet, and safe operations, and no strain on local infrastructure
- Batteries are designed for long-term use and can be recycled or repurposed at the end of their operational life

About Savion

Savion, a Shell Group portfolio company with a growing portfolio of more than 40.8 GW, is one of the largest, most technologically advanced utility-scale solar and energy storage project development companies in the U.S. Visit www.savionenergy.com.
